JAYASANKAR.K
Student architect

Architecture, to me, is about giving physical form to an idea that transformation from thought to structure is what draws me in as a student of the field. I'm driven by the belief that good design doesn't just build spaces, it has the power to quietly shape how people live, think, and connect with the world around them

Tamil

Softwares

BIM/CAD -	Revit/Autocad
Modeling -	Sketchup
Rendering-	Lumion/D5 render
Adobe -	Photoshope/Illustrator/Indesign

01

MIXED USE COMPLEX

Our mixed-use development in Noida brings together retail, office, and hotel spaces, creating a cohesive built form shaped around a central open space.

Selected work | Complex | Mixed use

MIXED USE BUILDING

OVERVIEW

Typology: Mixed use
Location: Gurgaon,Noida

Designed in Autocad and Sketchup
Rendered in D5 render
Post Production in Photoshop

#MasterPlan

Welcome to our mixed-use development in Noida, where retail, office, and hotel spaces come together to create a dynamic urban destination. Designed as an integrated development, the project brings together diverse functions within a cohesive architectural expression, creating a vibrant environment for work, stay, and everyday activity.

#Exploded view

Selected work | Complex | Mixed use

Form. Dividing the mass into separate volumes to create a more open and

Carving. Removing the central portion of the mass to introduce a void within the built form.

Connecting. Joining the two resulted block using a connector volume

Opening. Refining the central void into a defined circular space within the composition.

Verticality. Developing the final form into two distinct built volumes while retaining the central

#Axonometric

This axonometric view offers a comprehensive overview of the mixed-use development, highlighting the integration of retail, office, and hotel spaces within a cohesive built form. It illustrates the relationship between the two primary building volumes, the connecting bridge, and the central open space, creating a unified architectural composition.

Retail Floor Plan

Office floor plan

Hotel floor plan

#DETAILS

The retail building is designed to accommodate diverse commercial spaces, creating an active and accessible environment for shopping and everyday activities. Its layered built form organizes the retail functions while contributing to the overall identity of the mixed-use development.

#COLOUR

A contemporary architectural expression defines the retail building, with its articulated volumes and open edges creating a dynamic interface between the building and its surroundings.

If you give me the actual retail details (number of floors, types of shops, food court, atrium, etc.), I can make the #DETAILS paragraph much more specific like your hostel

02

ARCHITECTURE COLLAGE

he design explores the concept of “Blending Nature” by integrating natural elements with the built environment. The campus is designed to create a calm, interactive, and inspiring learning atmosphere through green spaces, courtyards, natural light, ventilation, and seamless indoor-outdoor connections. The approach aims to make nature an integral part of the students’ everyday learning experience. 5TH SEM WORK

ARCHITECTURE COLLAGE

OVERVIEW

Typology: Collage
Location: Delhi

Designed in Autocad and Sketchup
Rendered in lumion
Post Production in Photoshop

#MasterPlan

The project focuses on designing an Architecture Institute in Vasant Kunj, New Delhi, envisioned as a learning environment where architecture education is shaped through experience, interaction, and connection with nature. The campus integrates academic, administrative, residential, recreational, and community spaces while responding to the site's topography, climate, landscape, and environmental conditions. The design creates a strong sense of arrival, where entering from the main road offers a visual connection to the landscape and the central campus space, creating an inviting first impression and guiding users naturally into the heart of the campus. Experiential learning is further encouraged through courtyards, pedestrian-friendly spaces, natural daylight, ventilation, and sustainable landscape strategies.

The campus follows the concept of "Blending Nature with Architecture," creating a seamless relationship between the built environment and the landscape. The building forms are organized around a central green heart, allowing nature to become an integral part of the campus experience. Curved pathways, landscaped courtyards, stepped seating, trees, rocks, and open outdoor spaces weave through the built forms, creating continuous opportunities for interaction and relaxation. The architecture opens towards these green spaces through terraces and corridors, allowing students to experience nature, movement, and learning as a connected experience.

Second floor plan

Admission block

#ABOUT

The campus is envisioned as a series of interconnected spaces shaped around a central landscaped court. The curved building forms create a strong sense of enclosure while opening views towards the green heart of the campus. A circular arrival court anchors the entrance, with pathways gradually leading into the central landscape. Stepped seating, trees, planting, rocks, and shaded outdoor areas are integrated throughout the campus, creating informal spaces for students to sit, interact, relax, and learn. The layered terraces and open corridors visually connect the different levels of the academic blocks with the landscape, creating a campus experience that is open, interactive, and strongly connected to nature.

03

CASA VERDE

Casa Verde is a contemporary tropical residence in Malappuram, Kerala on 50 cents — defined by lush greenery, slender louvres, a cantilevered entrance canopy, and a private pool courtyard

Ground Floor Plan

The ground floor of Casa Verde is organized around central living and dining core, with three bedrooms positioned at the corners, it attached to its own bathroom for privacy. A well-connected kitchen sits toward the rear, while utility and wash areas are tucked along the periphery, keeping service functions discreet. Despite its each irregular, articulated footprint, the plan maintains clear circulation, reflecting the "Form Follows Function" philosophy behind Casa Verde's design

A landscaped courtyard unfolds around a tiled lap pool, framed by timber decking, tropical planting, and slender vertical greenery climbing the facade, Glazed openings.

A deep-set vertical window with warm timber framing punctuates the plastered facade, creating a striking play of light and shadow. The recessed opening adds depth and texture to an otherwise minimal, monolithic wall surface

Sectional View

The sectional cut reveals a sloped roof profile and generous interior volume, opening out toward the pool deck beyond. Layered glazing and a shaded overhang illustrate how daylight and airflow are channeled through the living space.

04 VILLA REGALIA

Villa Regalia is a refined luxury residence designed around grand proportions, classical detailing, and spacious living. The composition of layered volumes, elegant openings, landscaped surroundings, and a private pool creates a sophisticated living environment that balances grandeur with everyday comfort.

Functionality:The residence accommodates a comprehensive range of private and shared spaces, including multiple bedrooms, living and dining areas, kitchen, service spaces, parking, and recreational zones. The planning establishes a clear hierarchy between formal, family, and private functions.

Form &Function:The building is composed through a balanced arrangement of projecting volumes, terraces, columns, and framed openings. The layered massing responds to the internal functions while creating a grand and cohesive architectural expression.

Classical proportions, ornamental detailing, arched openings, and a strong central entrance define the character of the residence. The formal façade is complemented by landscaped surroundings and a private pool, creating an elegant residential setting.
